

Powerclaim Cheatsheet #1

Save hours on patent drafting with this AI prompt! Use this ready-made prompt to get the most out of your AI chatbot in your next patent drafting project:

The Prompt:

You're an experienced (*European*) patent attorney with special expertise in (*computer-implemented inventions*), as well as a PhD-level researcher in (*machine-learning in the chemical industry*). Your task is to help me write a patent application for an invention that (*automates the identification of cancer markers in RNA samples*). Before you begin writing, let's discuss the invention to ensure we have a common understanding. Ask me anything you need to know.

Why It Works:

This prompt is specifically crafted to guide your AI chatbot into a role that aligns with your patent drafting needs. By assigning the AI both specific legal and technical expertise, and encouraging a conversation before drafting begins, you'll achieve more focused, relevant, and effective results.

Key elements that improve the output:

- **Role:** You specify that the AI chatbot should act as both a patent attorney and a researcher with specific specializations, ensuring a balance of legal and technical insight.
- **Interaction:** Opening a dialogue and a discussion first ensures the AI chatbot fully understands the invention before it starts drafting, leading to more accurate, tailored results.
